Bordel!
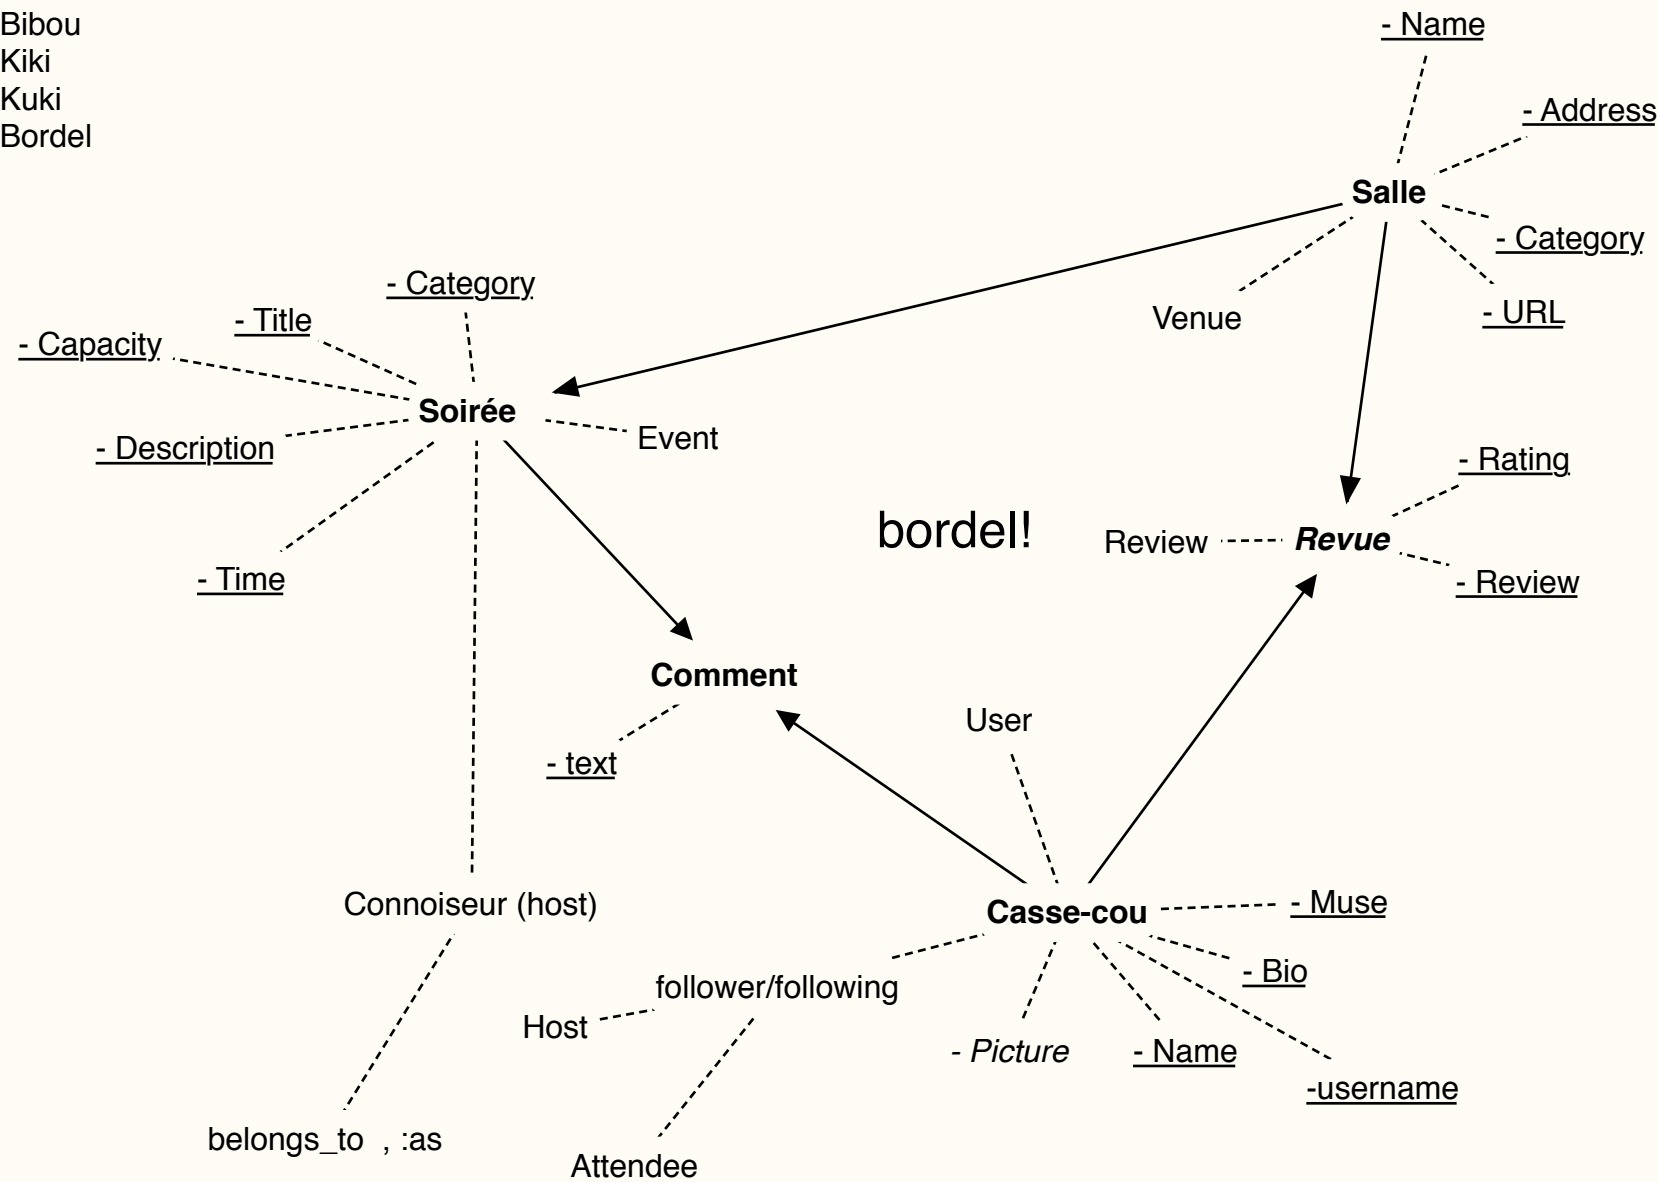

An app for adventurers adventuring together

Values:

1. Natasha values: learning more on rails

2. Russell values: creative deployment of current knowledge with unsolved problems or consumer pain points.

The Problem:

1. Within our community, we are not able to share events that we like to attend.

2. It is difficult to find out your friend's favorite places to eat, drink or concert-go, and to plan to go together.
